

The League of Women Voters Needham
Climate Action Committee invites you to
join us for a presentation from
Sony Pictures Classics of:

Who Killed the Electric Car?

Did you know that the first electric engine was invented in 1859 by Thomas Davenport using un-rechargeable batteries?

Did you know that over 100 years ago in the year 1900 an electric vehicle by BGS Company set the first distance record by traveling 180 miles on a single charge?

Where did this technology go all these years past? Join us to learn more about the history of the electric engine and the important role it must play in the reduction of our dependence on oil powered vehicles and global warming.

Date: January 6, 2007

Time: 1:30 p.m.

**Where: Needham Public Library
(Community Room)**

This free event is open to all so we hope you will gather up some friends and join us for an informative afternoon!

Refreshments will be served!
